COSMIC CONSISTENCY: WMAP vs. pre-WMAP

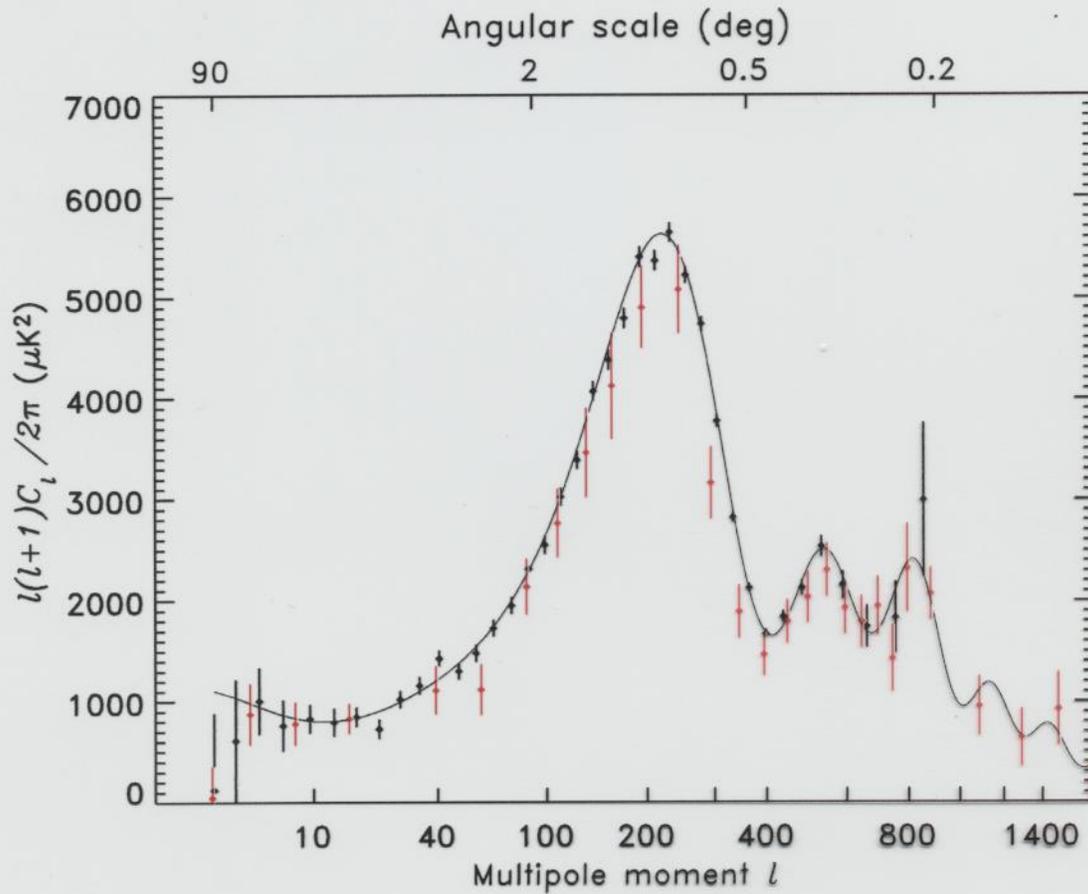

Fig. 10.— The WMAP combined power spectrum, in black, compared to a compilation of all CMB data published prior to WMAP from Wang et al. (2002a), in red. The WMAP data are plotted with cosmic variance plus measurement uncertainties here in order to facilitate a comparison with the compiled data which is reported in this way. The data agree well on COBE scales, $l < 20$, (but note that the WMAP cosmic variance errors are computed from the best-fit model rather than the data, thus they appear larger than the COBE errors at the quadrupole). However, the overall normalization of the WMAP spectrum is $\sim 10\%$ higher on smaller scales.
