

280m hall and left-right monitor –update–

Takaaki Kajita

2km meeting, April 20, 2006

On April 10, 2006, we had a meeting with Tsukamoto-san and the other KEK T2K members on the 280m hall.

We concluded that we should try to design the experiment with the 17m diameter hall for further detailed design (, which will involve the KEK construction department). In studying detailed designs, it may happen that the actual diameter must be as large as 17.5 meters, if equipments for the facility are fully taken into account. But as far as the detector design is concerned we will design within the 17m diameter.
